Lima - La Victoria

**ORGANIC OVEN GRILLED CHICKEN FOR A CARBON ADVANTAGES:**

- Do not generate any smoke therefore does not pollute the environment.
- Internal recirculation of heat causes will be exploited at 100% for the firing of the chickens , for best cooking until well defatted bone . That results in chicken fat.
- The coal consumption is 50% less than normal.
- No need extractor.
- No nenecita fireplace (pipelines )
- Operator or ovenbird was found protected from radiation of heat from the burning coal since this is on the lower back of the cab of the oven.
- It saves on electricity, not to use extractor.
- No accumulation of fat inside the cab to remain dry which rules out any possibility of fire.
- The ignition smokeless coal because it is performed by means of a propane burner.
- Presents a side income for coal door.
- This eco coal furnace can be installed in buildings of any height, not to use products or strong extractors that cause great expense and danger of fire.

It also saves money by avoiding costs in maintenance and cleaning of exhaust ducts that occurs every 15 days.
